***A contract worth over €100 million***

## **Alstom and Mosenergo sign service agreement for a combined heat and power plant in Moscow, Russia**

Alstom Thermal Power has signed a long term service contract with JSC Mosenergo in Russia for the 420 MW power generating unit #8 at the combined heat and power plant TPP-26, located in Moscow. The contract is valued at more than €100 million. It is the first time such a large scope for a service contract is awarded to an international company in Russia.

The 14-year service agreement includes all maintenance to be carried out at the plant including management of daily service activities as well as supply of spares. Equipment covered includes all Alstom equipment in the generating unit #8, consisting of one GT26 gas turbine, one steam turbine, two air-cooled generators and additionally one heat recovery steam generator (HRSG).

Unit #8 of power plant 26 entered commercial operation in June 2011. Based on Alstom's GT26 gas turbine, with efficiency close to 59%, it is the most efficient combined cycle power plant in Russia today. In 2007, when the contract was awarded, Alstom became the first foreign company to build a power plant in Russia on an Engineering, Procurement and Construction (EPC) model. In 2007, Alstom had also signed a maintenance contract covering the GT26 gas turbine.

Hans-Peter Meer, Senior Vice President of Alstom Thermal Services said: *"This agreement with JSC Mosenergo is a result of the performance achieved in the previous service contract. It confirms Alstom's position as a leading service provider for power plants. Our gas turbine technology has already made TPP-26 the most efficient gas-fired power plant in the country and we are dedicated to support our customer to maintain this performance while also optimising his plant operation costs."*

Alstom is currently executing nearly 80 such service contracts for gas-fired power stations where it has supplied equipment, covering more than 150 gas turbines. Thermal services contribute nearly half of the Alstom Thermal Power Sector's turnover. The business continues to register strong order volumes as customers globally invest in services to optimise the performance of their power plant.

## **About Alstom**

*Alstom is a global leader in the world of power generation, power transmission and rail infrastructure and sets the benchmark for innovative and environmentally friendly technologies. Alstom builds the fastest train and the highest capacity automated metro in the world, provides turnkey integrated power plant solutions and associated services for a wide variety of energy sources, including hydro, nuclear, gas, coal and wind, and it offers a wide range of solutions for power transmission, with a focus on smart grids. The Group employs 92,000 people in around 100 countries. It had sales of €20 billion and booked close to €22 billion in orders in 2011/12.*
